

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

Problem	Solution	Benefit
Parcel booking is difficult	Salesforce Parcel Management	Centralized parcel booking
Tracking needs customer support	AgentForce AI + Prompt Builder	Self-service parcel tracking
Manual status updates	Salesforce Flows	Automated process
Delay in delivery communication	Email Alerts	Timely notifications
Shipment information is scattered	Parcel, Delivery, Sender and Receiver objects	Organized data
Difficult to monitor operations	Reports & Dashboards	Better operational visibility
Different users need different access	Profiles, Roles and Permission Sets	Secure access

4.2 Proposed Solution

The proposed solution is a **Salesforce-based Parcel Management System** called **SwiftShip Tracker**.

- It manages parcel booking and delivery information in one centralized system.
- Customers can track parcel status and delivery details easily.
- **AgentForce AI and Prompt Builder** provide conversational parcel tracking support.
- **Salesforce Flows** automate booking, status updates and delivery-related processes.

- **Email Alerts** help provide timely delivery notifications.
- **Reports and Dashboards** help monitor parcel and delivery operations.
- Role-based security provides different access levels for customers, delivery agents, support staff and administrators.
- The system can support growing parcel operations through **Experience Cloud and external logistics integrations.**

Key Parameters

Parameter	Description
Problem	Difficult and inefficient parcel booking and tracking
Solution	Salesforce-based Parcel Management System
Innovation	AgentForce AI, Prompt Builder and Salesforce Flows
Impact	Centralized booking, tracking visibility and timely notifications
Users	Customers, delivery agents and support staff
Scalability	Supports growing parcel operations and external integrations

4.3 Solution Architecture

The SwiftShip Tracker architecture consists of the following layers:

Users

Customer → Delivery Agent → Support Staff → Admin

Salesforce Lightning / Experience Cloud

SwiftShip Tracker Salesforce Platform

Data Layer

Parcel → Delivery → Sender → Receiver

Automation Layer

Flows → Approval Processes → Apex Classes → Batch Apex →
Email Alerts

AI Layer

AgentForce AI → Prompt Builder → Parcel Tracking Agent

Security Layer

Profiles → Roles → Permission Sets → Sharing Rules → Field-Level
Security

Reports & Dashboards

Parcel Tracking & Operational Insights

Solution Architecture

SwiftShip Tracker – Salesforce Based Parcel Management System
